Feature Extraction

Extracting the features

- Only the Features which have high influence with the output is extracted to increase the efficiency and accuracy of the model
- Done using Correlation matrix and HeatMaps for visual

Correlation Matrix

- A correlation matrix is a table showing correlation coefficients between variables. Each cell in the table shows the correlation between two variables.
- A correlation matrix is used to summarize data, as an input into a more advanced analysis, and as a diagnostic for advanced analyses.

Sample Dataset

```
iris = sns.load_dataset("iris")
  print(iris)
     sepal_length
                    sepal_width
                                  petal_length petal_width
                                                                  species
               5.1
                             3.5
